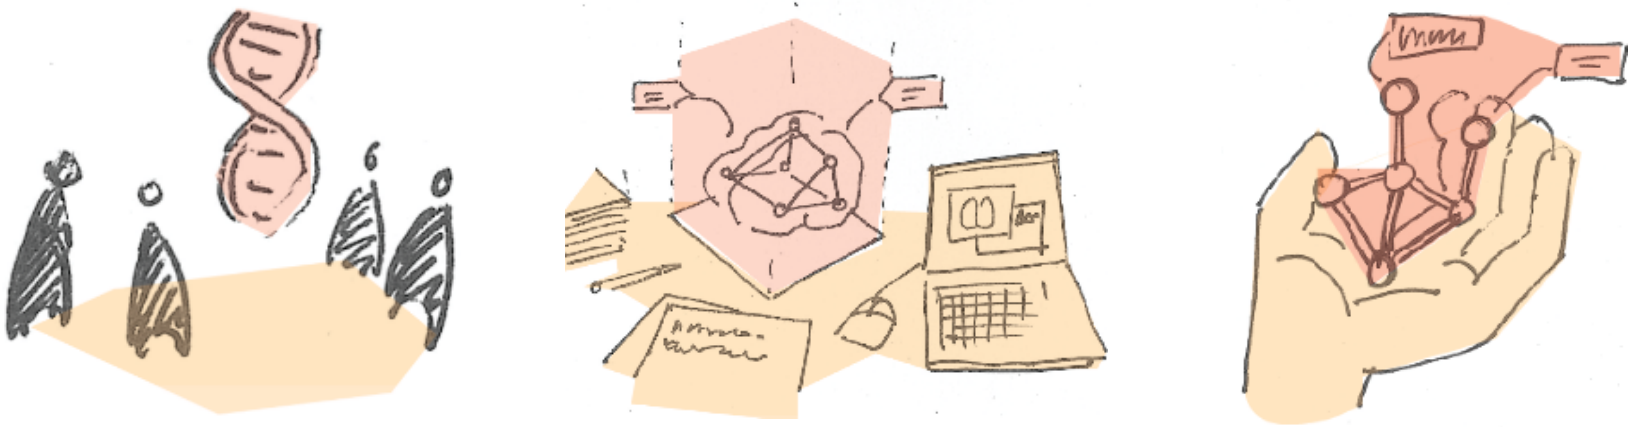
Introduction to Immersive Analytics



Dr Maxime Cordeil and Dr Arnaud Prouzeau
FIT3179 Data Visualisation Semester 2, 2019

MONASH University

Contact

- max.cordeil@monash.edu
- Building H, Level 6, room 54

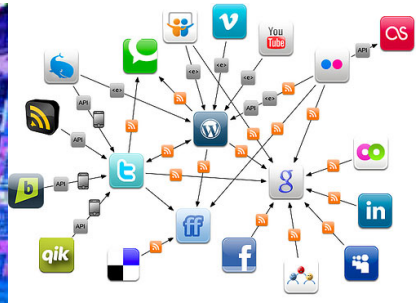
Overview

- Big data
- Visualisation
- Multivariate-multidimensional data
- Introduction to immersive analytics
- First look at Unity and IATK
- Demos!

Data everywhere, all the time

Big data

- Sensors
- Businesses, servers, data centres
- Social networks
- Transports …



How do we make sense of this data?

- Statistics
- Machine Learning

Limitation of automated methods

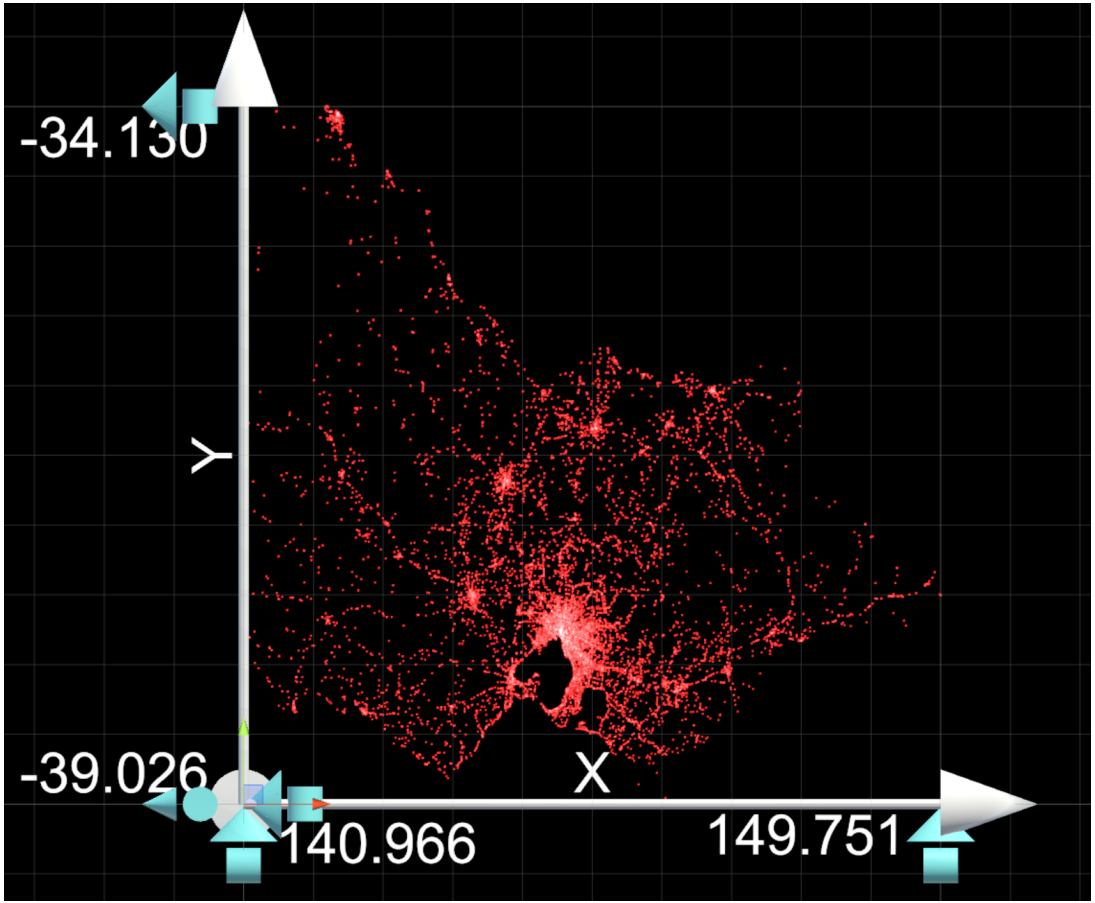
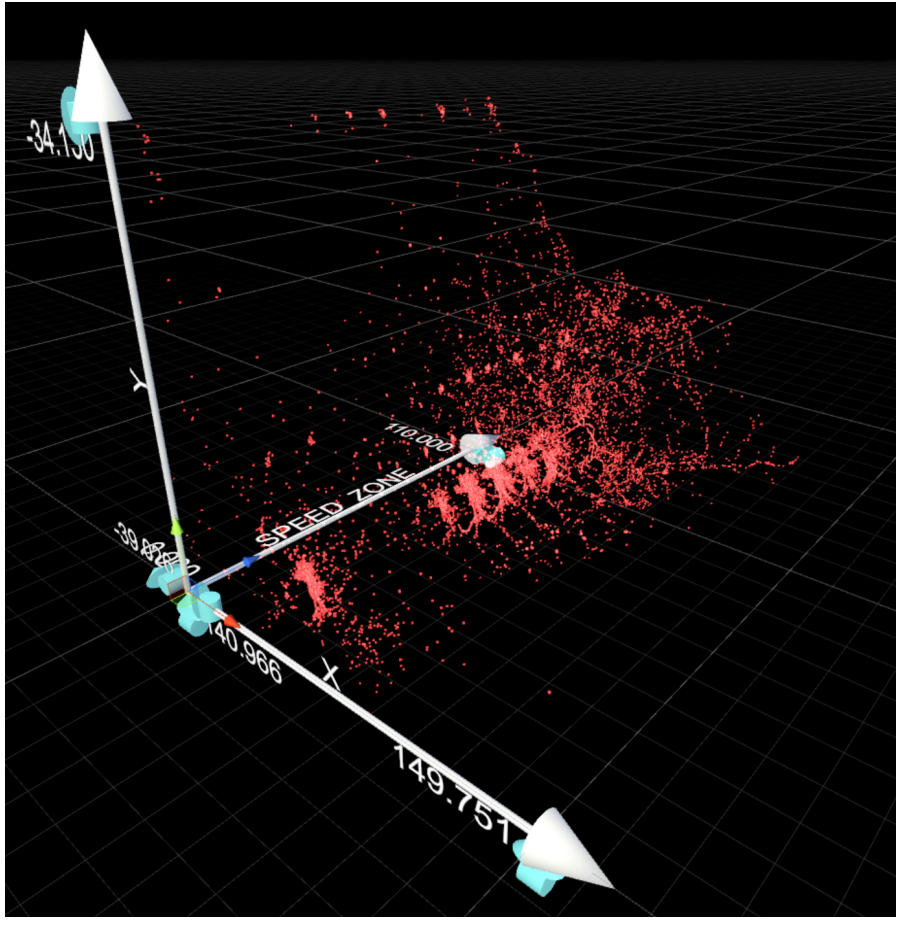
visual analytics / infovis

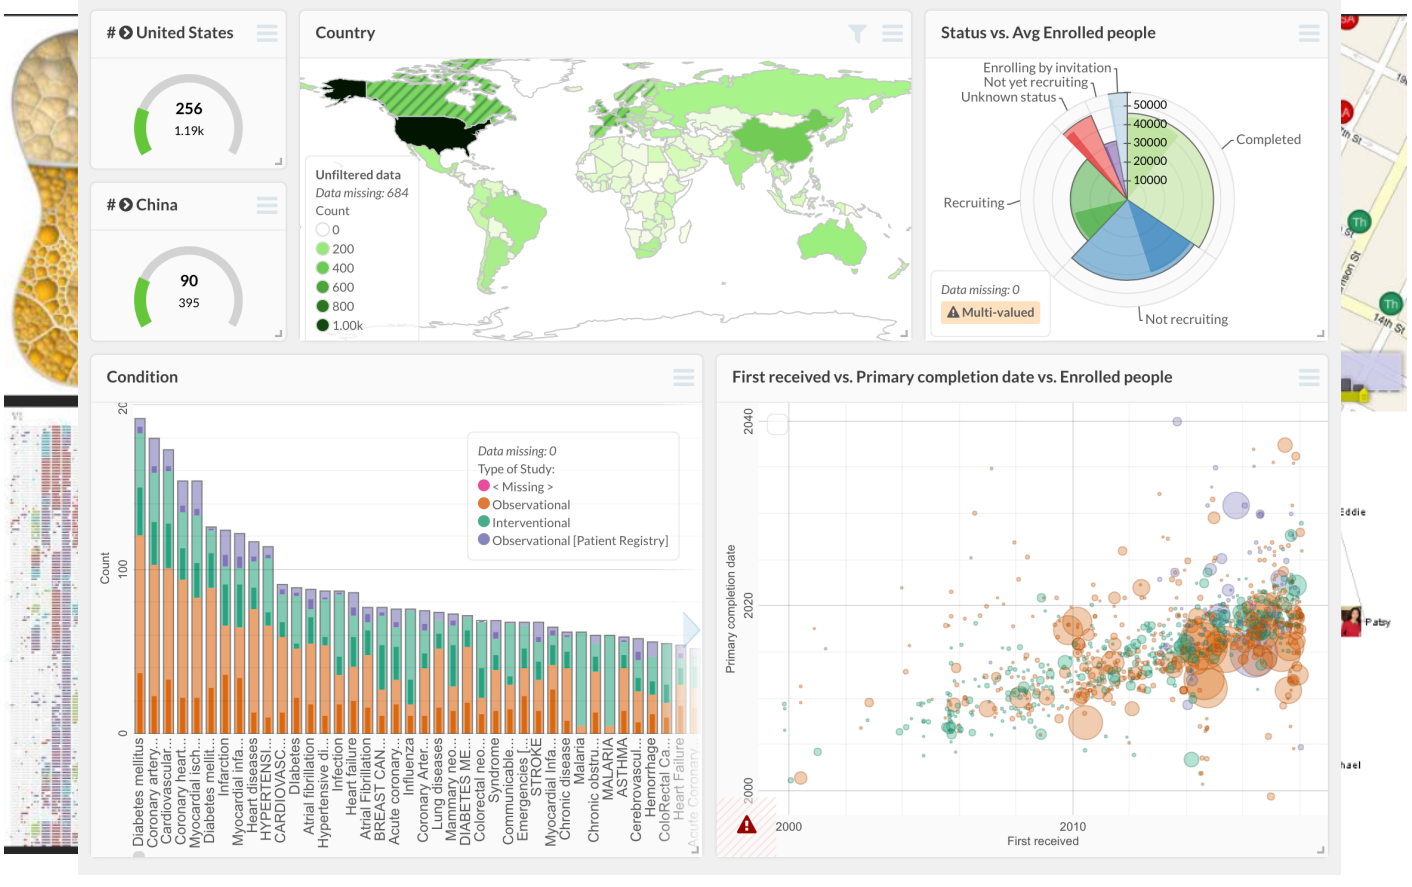


3D space to understand data



Three big families of data visualisation

- Scientific visualisation, Information Visualisation (InfoVis), Visual Analytics



InfoVis / Visual Analytics

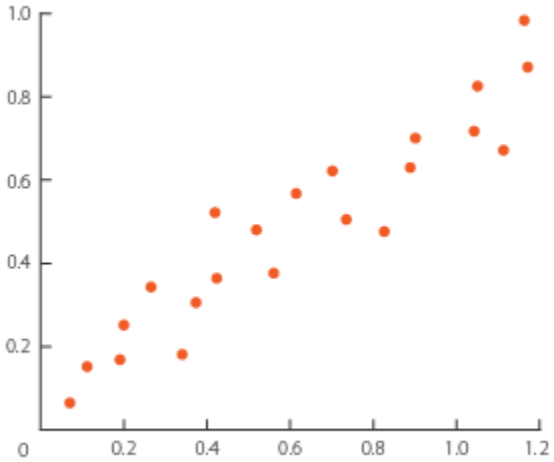
- Most data are multivariate, multidimensional
- E.g, house price market
  - Suburb
  - Construction date
  - Number of rooms
  - Surface
  - …

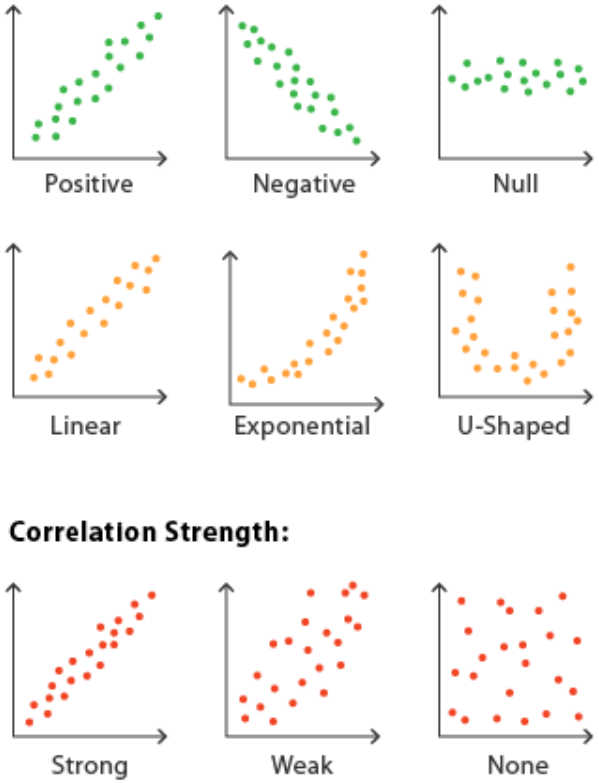
How do we visualize Multidimensional data?

- Scatterplots
- Scatterplot matrices
- Parallel coordinates plots

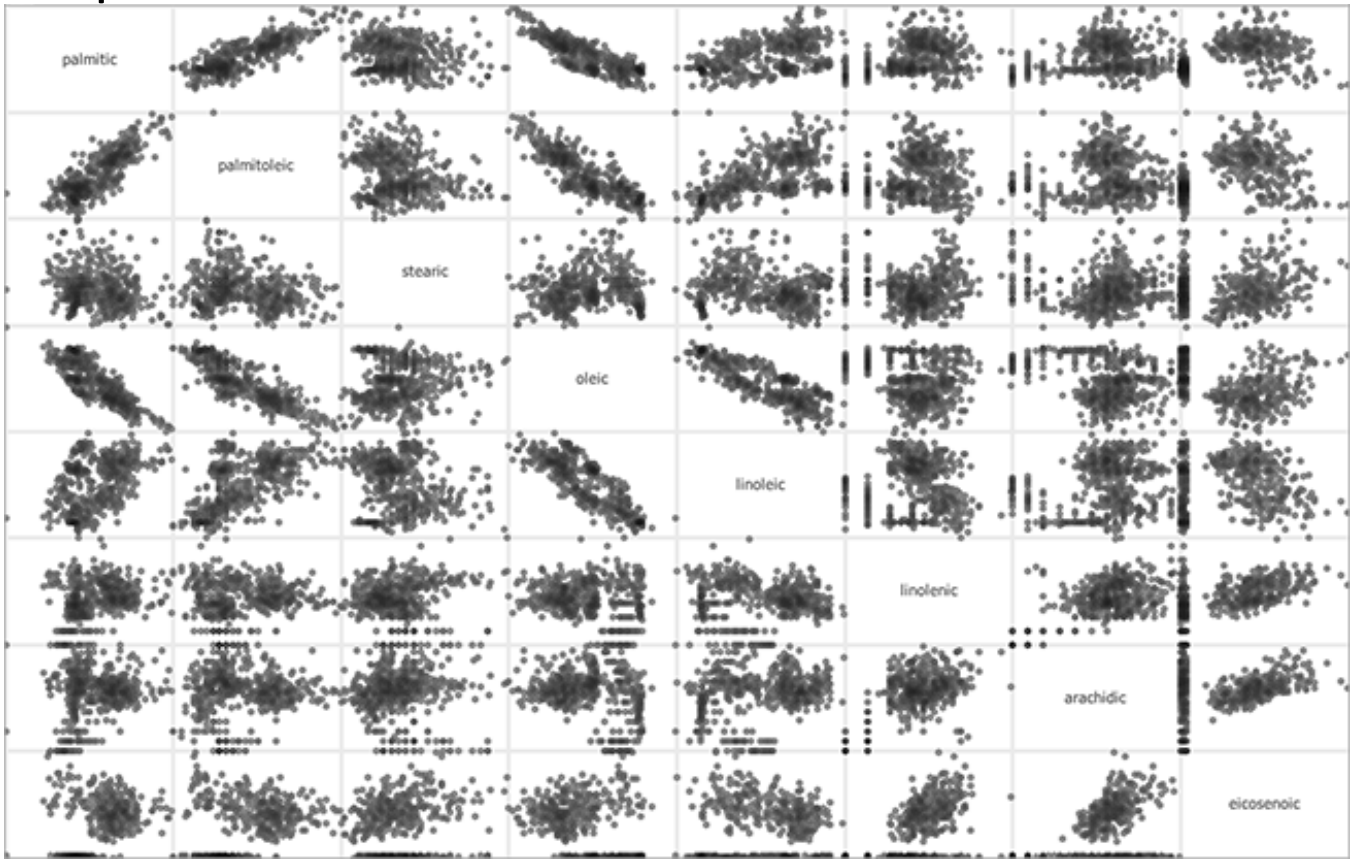
- When dimensions are **very large we need** dimension reduction techniques
  - PCA
  - T-sne

Scatterplots



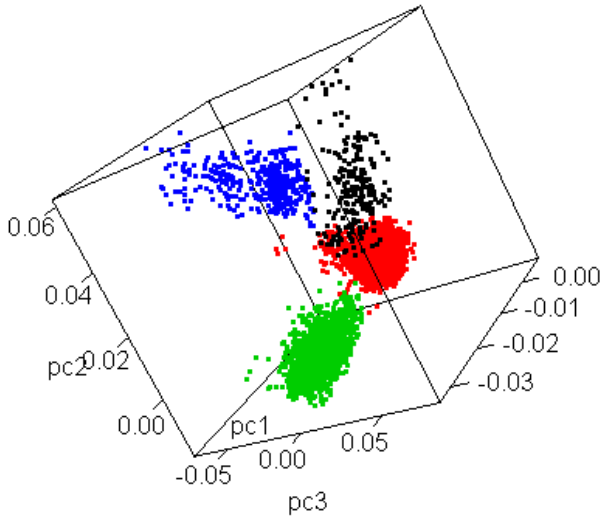


Scatterplot matrices



3D Scatterplots

- Dimensionality reduction (e.g. PCA, t-sne)
- Useful when n dimensions is large



Parallel Coordinates

- Introduced by M. Ocagne in 1885, more formalism by A. Inselberg in 1985
- https://syntagmatic.github.io/parallel-coordinates/

Reading Parallel Coordinates plots: patterns

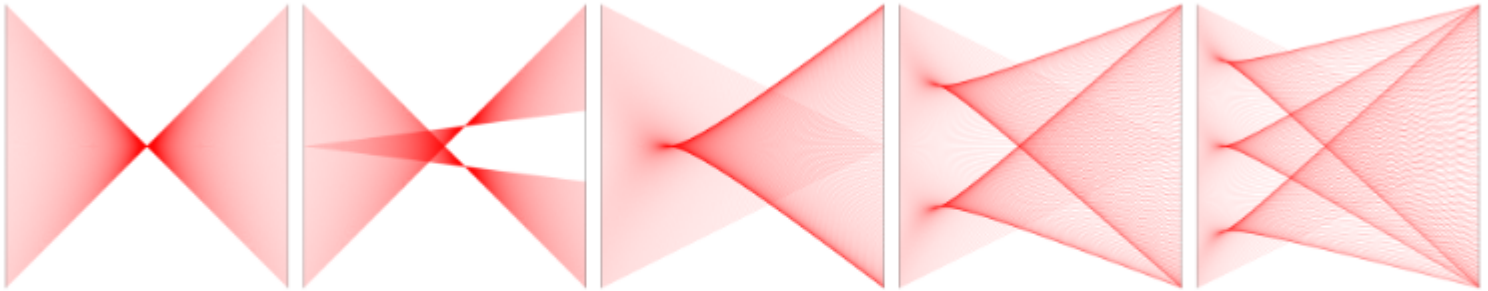


Figure 2: The five stimulus patterns used in the study. From left to right: negative linear relationship, negative linear relationship with a discontinuity, sinusoidal relationships with one, two and three periods respectively.

Johansson et al. – Perceiving patterns in parallel coodinates: determining thresholds for identification of relationships

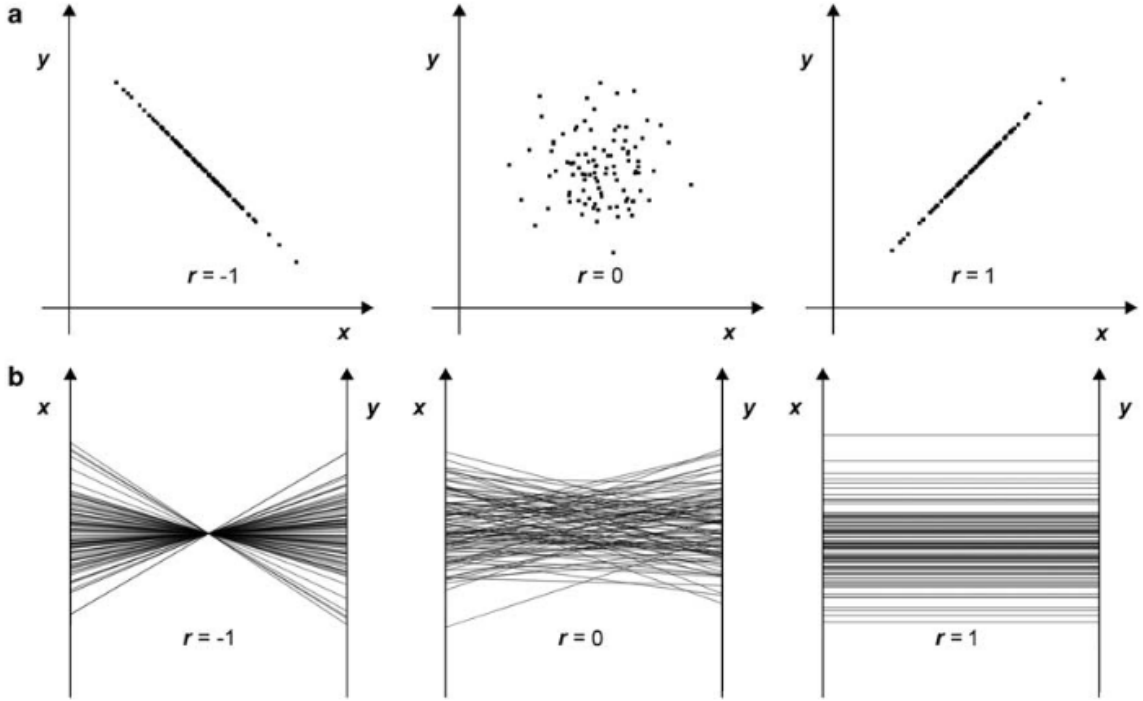

Figure 3: The three extreme values of *r* visualized with **(a)** scatterplots, and **(b)** parallel coordinate plots.

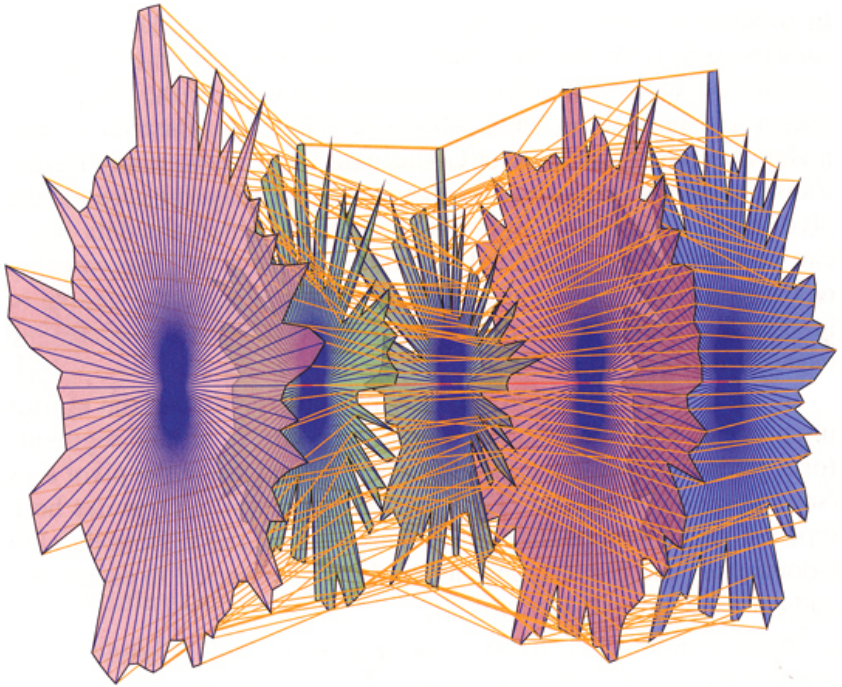
Judging Correlation from Scatterplots and Parallel Coordinate Plots, Jing Li et al. 2010, *Information Visualization (IV)*

Extension to 3D

Figure 7: Multi-relational 3D parallel coordinates visualizing a data set consisting of 7 (left), 11 (middle) and 19 (right) variables.

More advanced PCP, connected VIS



Interactivity

- Picking
- Brushing

Virtual Reality

Augmented Reality

Immersive Analytics Goals:

to remove barriers between people, their data and the tools they use for analysis
to support data understanding and decision making everywhere and by everyone
to make embodied tools that are intuitive, engaging,
and make the best possible use of all sensory channels.

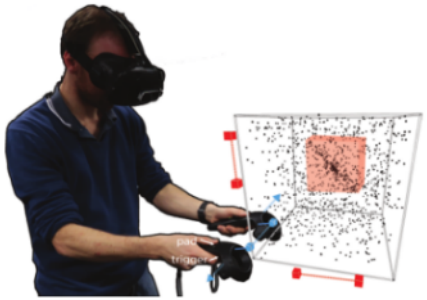
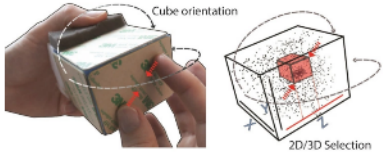
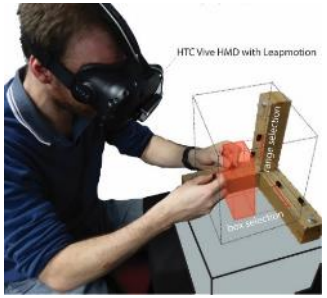
What is the design space for spatio-data coordinated systems for immersive visualisation?

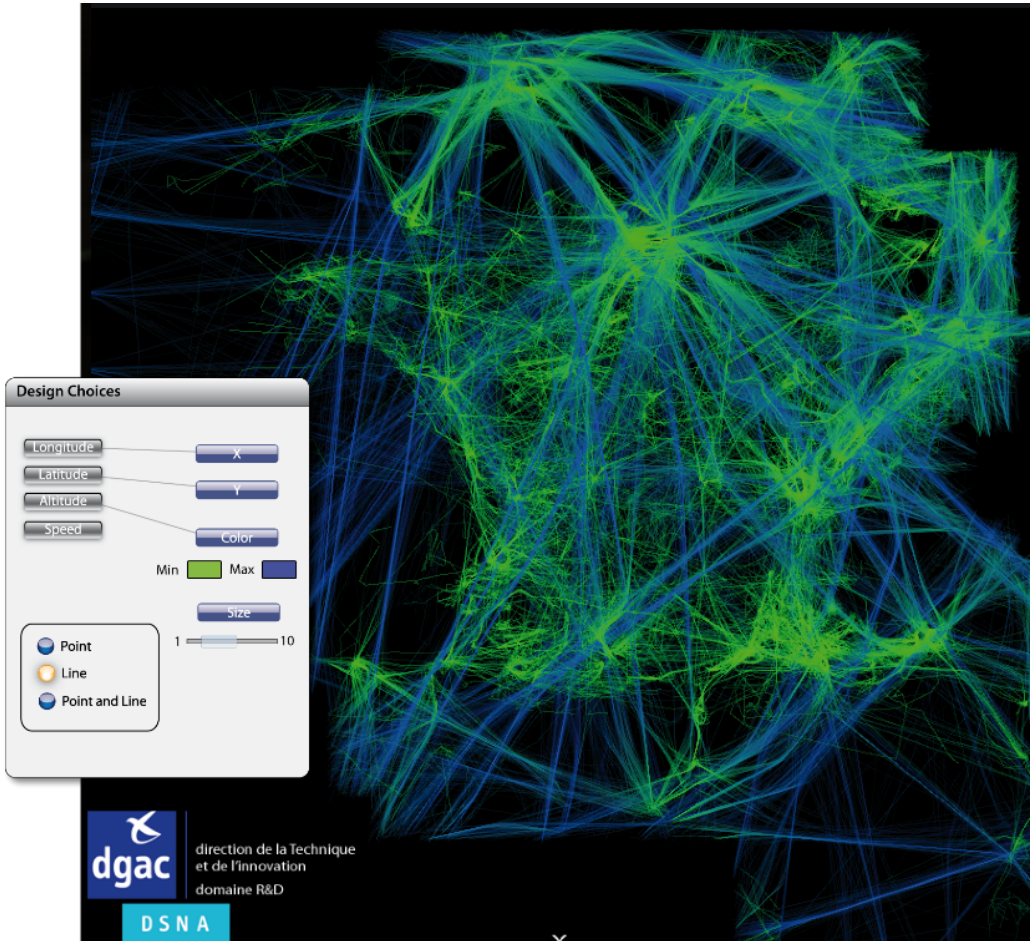




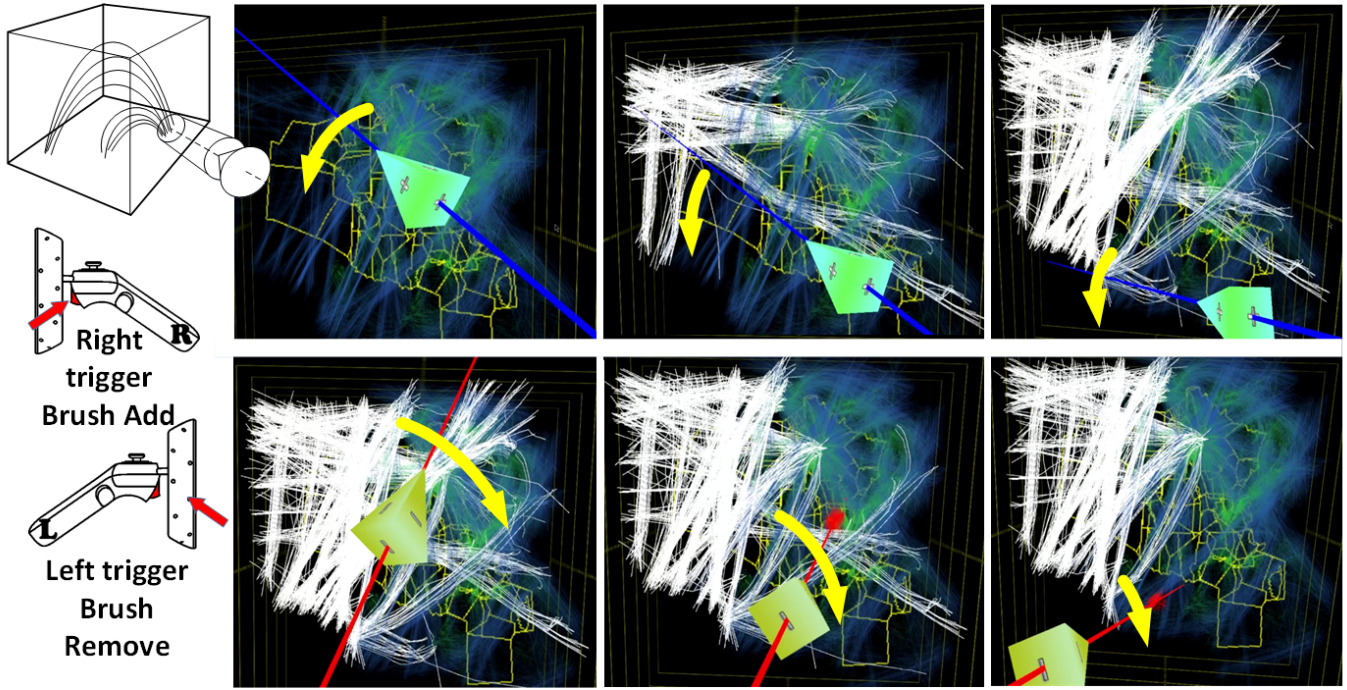


DIMENSION	Virtual Mid-air	Touch-Sensitive Cube	Physical Axes
SIZE	Room size	Hand size	Desktop size
PHYSICALITY	Mid-air Gestures	Physical edges, faces	Physical axes
SPATIAL MAPPING	Direct spatial mapping	Indirect spatial mapping	Direct spatial mapping

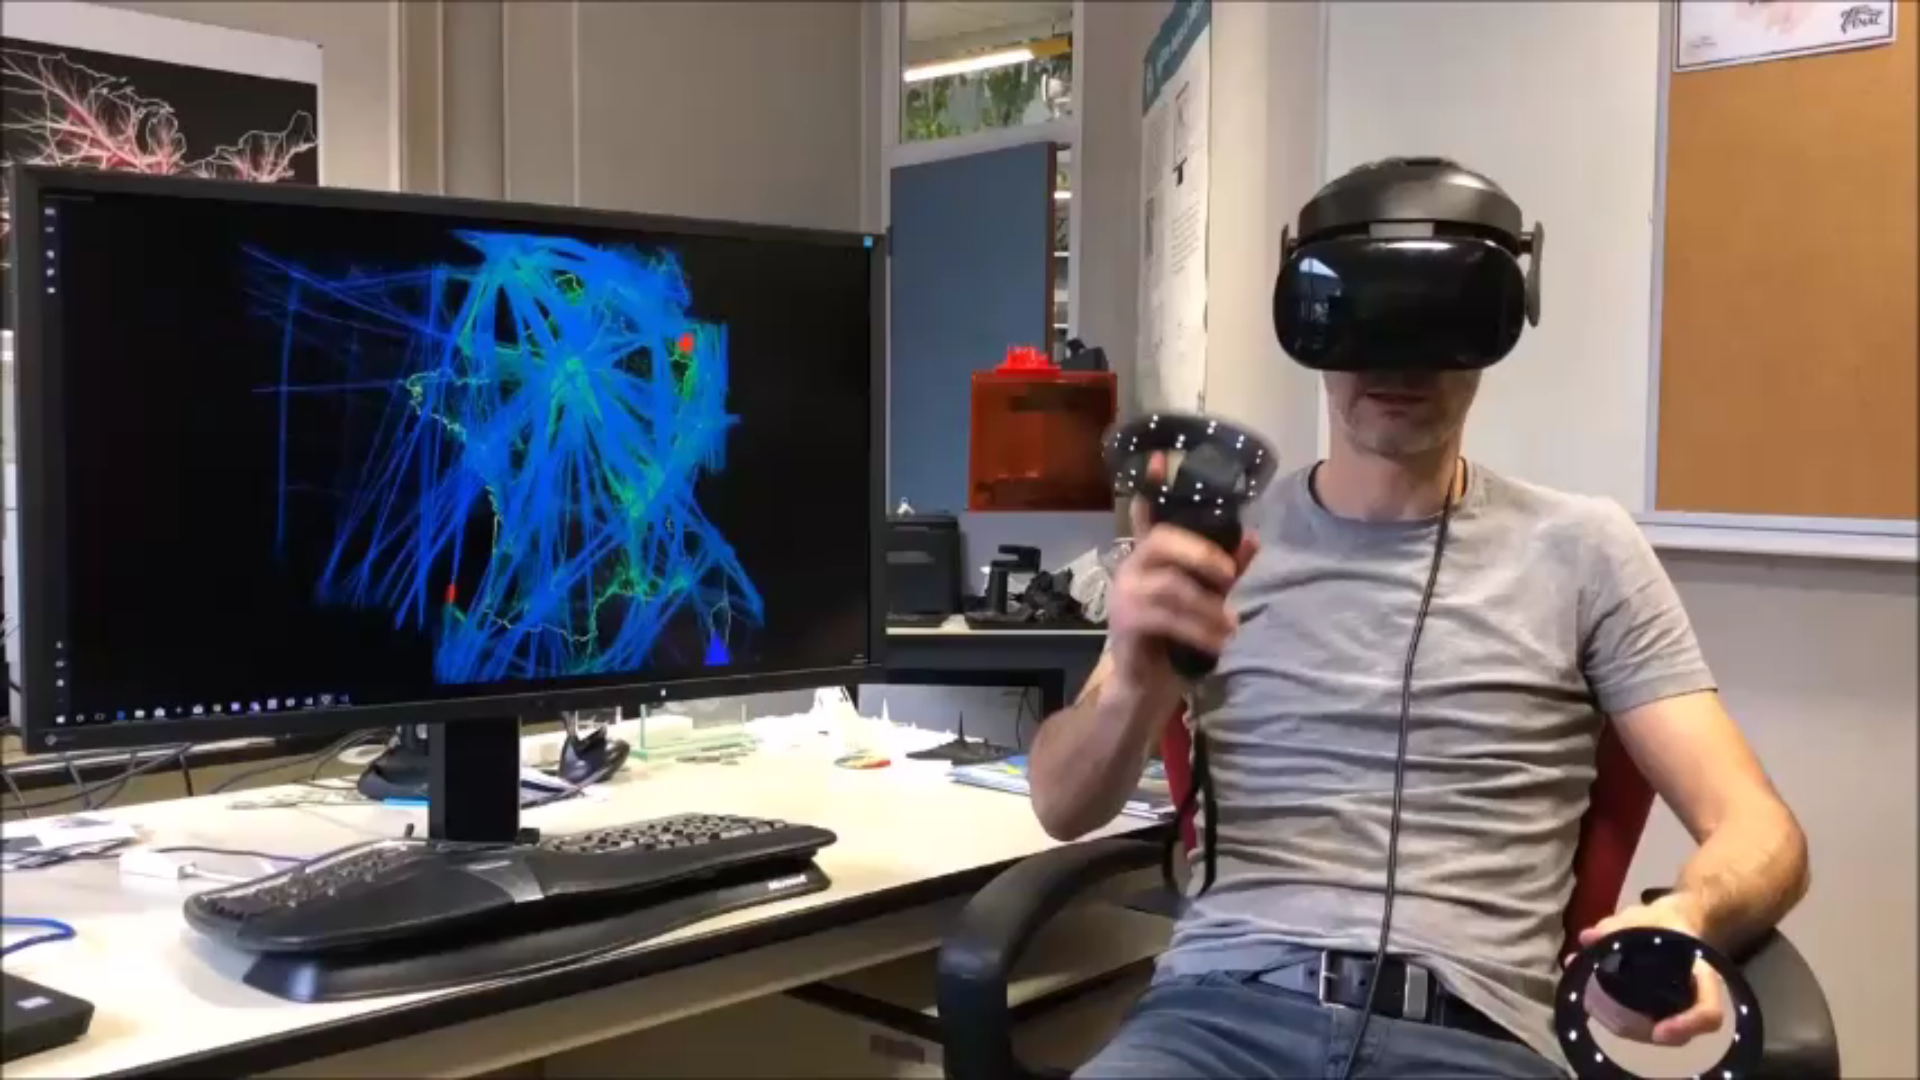
Exploration of multivariate trajectories in Virtual Reality



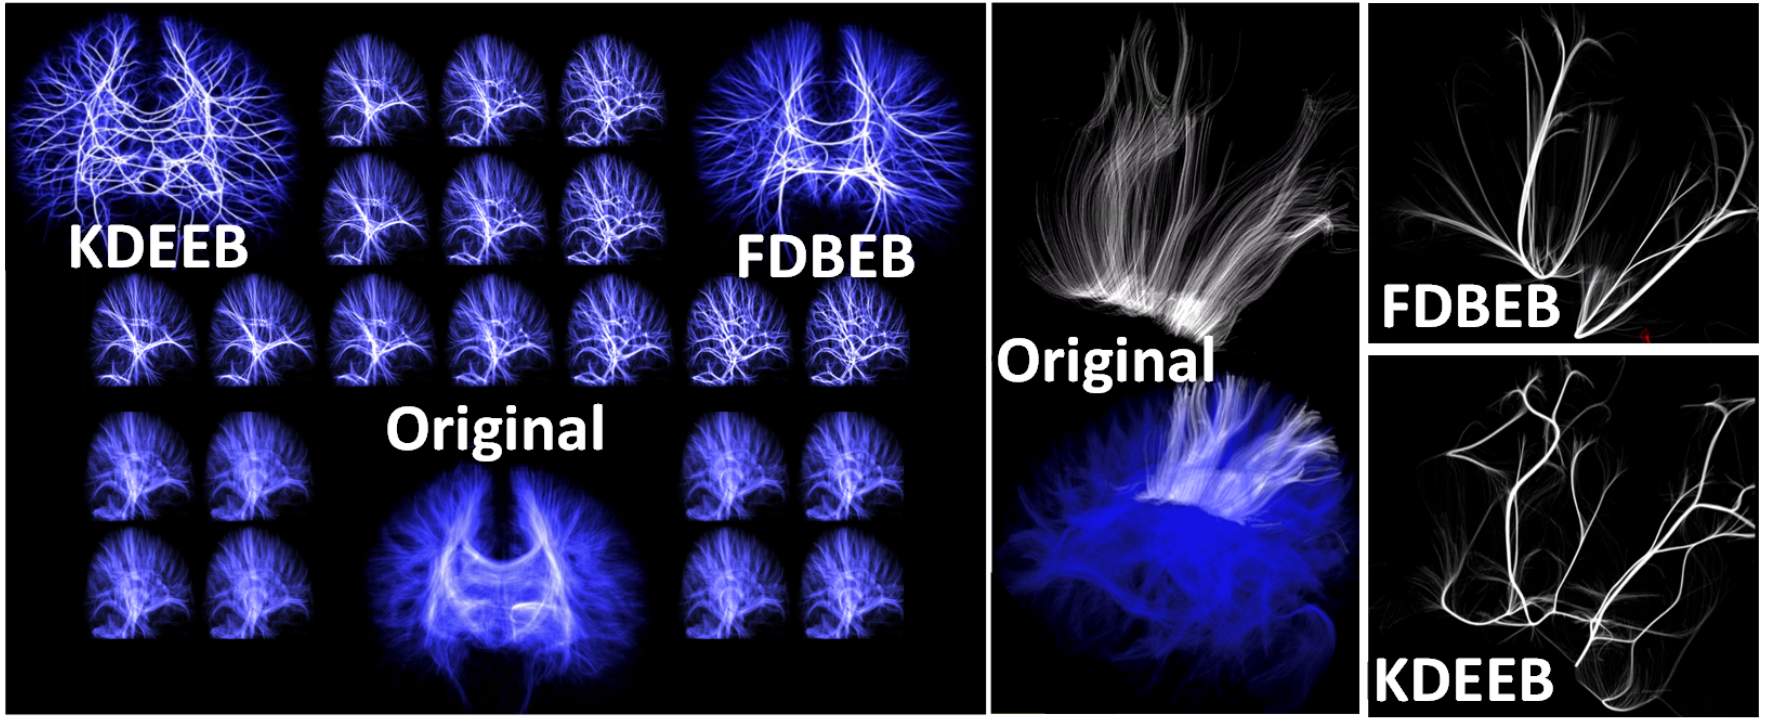
FibreClay – Immersive 3D curves exploration



Hurter, Riche, Drucker, Cordeil, Alligier, Vuillemot – IEEE TVCG 18



Immersive Analytics Opportunities for DH



Conclusion

- Multivariate data are ubiquitous
- A lot of different techniques to visualise and analyse MV data
- Immersive Analytics helps?

thanks
